

Skinpen

SKINPEN

Stimulates the formation of collagen and elastin. Improves the appearance of the skin.

SKINPEN

eberlin
BIOCOSMETICS

Device used in skin rejuvenation procedures and treatment of various skin conditions. The SkinPen has microneedle heads of different sizes that create microchannels in the skin in a controlled and precise way that stimulate skin repair and regeneration thanks to the stimulation of collagen and elastin.

CUSTOMER PROFILE
Skin with wrinkles, flaccidity, acne, scars, stretch marks and/or spots.
REFERENCE
AP00039
SYNERGY
All water-based serums.

01 | SKINPEN ACTION

eberlin
BIOCOSMETICS

REJUVENATION

Microneedling stimulates the production of collagen and elastin, improving the firmness and elasticity of the skin. This reduces the appearance of wrinkles, fine lines and scars, as well as improving the overall texture of the skin.

SCAR TREATMENT

The SkinPen is used to reduce the appearance of scars, including acne scars and surgical scars. The micropuncture process helps break down the collagen fibers in scars and stimulates the formation of new ones, reducing their appearance over time.

STRETCH MARKS TREATMENT

It also reduces the appearance of stretch marks by improving skin texture in affected areas.

SPOTS TREATMENT

It is effective in treating skin pigmentation, such as melasma and dark spots.

ACTIVE INGREDIENTS ABSORPTION

During the treatment, microchannels open that enhance the absorption of applied active ingredients.
